Light changes when it shines on different objects.

When light shines on stained glass, the light that passes through is the same color as the glass.

Wow!
Let's do this project and learn more.

Math and Science Project: Light and Objects

Find Out Talk to friends and relatives about light. Discuss how light changes when it shines on different kinds of objects.

Journal: Make a Book Show what you found out. In your book, also:

- Draw pictures showing light shining on objects that are see-through and not see-through.
- Make up and solve number stories about shining light on different objects.
